

BOTANICAL DIRECTORY

Because there is such variation in the Romanized Thai spelling, sometimes more than one variation of the plant's Thai name has been included. If the Thai name starts with *dok* (flower), *bai* (leaf), *ya* (grass), *rag* (root), *gason* (stamen/pollen), *gan* (inner trunk), *naam mun* (oil), or *luk* (fruit), then try looking the name up without the prefix.

All English names, scientific names, as well as alternative Thai names are listed in alphabetical order in the left column, with the correct spelling under which the botanical is listed in the “Botanical” section in the right column. If the correct Thai name is looked at, then there will be no referral in the right column. Once the proper Thai named is found, the botanical can be found alphabetically in the “Botanical” section.
